

Artificial Intelligence For Concurrent Coding

With increasingly complex regulations and insurance guidelines, hospitals are challenged to find efficiencies while improving patient care. Better, faster data is a solution. NeuralFrame's innovative software, MIRA (Medical Information Records Assistant), powered by artificial intelligence, creates medical codes automatically from clinicians' text. That means reduced costs and reliable, timely information for improved decision making, medical treatment, and revenue management.

NeuralFrame introduces a new wave of medical insight. Our breakthrough technology, MIRA, deploys artificial intelligence using our proprietary Natural Language Processing (NLP) engine to summarize and code patient data rapidly and accurately.

Focused on oncology, MIRA scans volumes of unstructured clinical text to extract precise, relevant information for coding and reporting. Applications include cancer registry reporting, billing, case finding, HCC coding, and more.

Processing data in a fraction of the time that manual extraction requires, this user-friendly software helps generate information that medical professionals can trust to improve the quality and efficiency of their workflows. MIRA accurately analyzes and structures even the most complex patient data including biomarkers.

Experts trained our platform to mine and understand unstructured medical narrative. Our system leverages true statistical learning, validation and feedback.

Dedicated to offering the cutting-edge combination of technology and medicine, NeuralFrame aligns with leading associations and organizations to offer best-in-class software solutions. We are part of NVIDIA's Inception program, which enables us to stay on the forefront of AI advances with access to their massive network of specialists and thought leaders. We also hold a gold membership with HL7®, a non-profit organization dedicated to empowering health data interoperability.

NeuralFrame is committed to protecting patient privacy and has earned the HIPAA Seal of Compliance from the Compliancy Group, an independent HIPAA compliance solutions company.
